2018 ELVS MANUFACTURERS' IMPLEMENTATION REPORT.....	A-1

The Resource Management Program of the Maryland Department of the Environment produced this report. Contents may be used without permission, provided credit is given.

♻️ This Report is Printed on Recycled Paper With 50% Post Consumer Fiber.

Background

In the 2009 legislative session, the Maryland General Assembly passed House Bill 1263 – Maryland’s Mercury Switch Removal from Vehicles Act (the “Act”), Chapter 713. The bill amended Environment Article, Annotated Code of Maryland, Sections 6-904 and 6-905.

The impetus for the Act was that processing scrap metal from motor vehicles was causing releases of mercury to the environment from mercury-containing switches. The Act requires removal of mercury-containing switches from end-of-life vehicles by vehicle recyclers and by scrap processing facilities. Manufacturers of vehicles with mercury switches are required to develop and implement a “mercury minimization plan” to assist entities required to remove mercury-containing switches from vehicles.

Section 6-905.5(j) of the Environment Article, Annotated Code of Maryland, requires the Maryland Department of the Environment (“the Department”) to submit a report on the implementation of the Act to the General Assembly by October 1 of each year. The report is required to include information on:

1. The number of mercury switches and mercury switch assemblies recovered from vehicles;
2. The capture rate of switch recovery achieved;
3. The number of switches projected to be recovered;
4. The amount and use of funds paid into the State Recycling Trust Fund for the administration of this Act; and
5. Any recommendations to improve the provisions of this Act or to increase the capture rate of mercury switches from vehicles.

This document is submitted in fulfillment of the requirement of Section 6-905.5(j) of the Environment Article, Annotated Code of Maryland. **This report covers the period from July 1, 2017 through December 31, 2017.** This is the final report being submitted, as the law requiring the report sunset on December 31, 2017.

Overview of Mercury Switch Collection Program

Under the Act, vehicle manufacturers that sold vehicles containing mercury switches in Maryland must develop a mercury minimization plan. The plan ensures that manufacturers will be responsible for removal and collection of mercury switches from end-of-life vehicles before the vehicles are processed at vehicle recycling and scrap processing facilities. Processing includes intentionally flattening, crushing, bailing, or shredding of vehicles. The plan is required to include information on the location of mercury-containing switches in vehicles by make, model, and model year; information on the safe and environmentally responsible removal and handling of mercury-containing switches; a plan for implementing and financing the removal, collection, and recovery of mercury-containing switches; payments to vehicle recyclers for each mercury-containing switch collected in accordance with the mercury minimization plan; and maintenance of appropriate record-keeping systems associated with implementation of the plan.

Vehicle manufacturers that installed mercury-containing switches have established a nationwide collection program for automotive mercury switches. This program is being implemented by the End of Life Vehicle Solutions Corporation (ELVS), an entity created by a consortium of motor vehicle manufacturers. The ELVS website (www.elvsolutions.org) states that ELVS was created by the automotive industry to promote the industry's "environmental efforts in recyclability, education and outreach, and the proper management of substances of concern."

Automobile manufacturers relied on the ELVS mercury switch collection program to serve as the core of the Maryland approved "mercury minimization plan" that the manufacturers were required to develop and implement under the Act. Under the program, ELVS provides vehicle recyclers and scrap processing facilities with specially designed containers for collection, temporary storage, and shipping of mercury switches removed from end-of-life vehicles. Pre-paid shipping is included with containers that are provided to program participants.

ELVS has developed educational materials that identify which vehicles have mercury switches, where the switches are located on the vehicles, and how the switches should be removed. These educational materials are provided to program participants, and are also made available on the ELVS website (www.elvsolutions.org).

Until Maryland's law sunset on December 31, 2017, Maryland participants were eligible for bounty payments from ELVS of \$4 per mercury light switch or mercury light switch assembly and \$6 per mercury-containing antilock braking system (ABS) unit, provided the switches were delivered to ELVS in accordance with requirements specified in the program plan. The plan also provided for a payment from ELVS to the Department of \$1 for each mercury switch delivered to ELVS in accordance with the plan. Maryland participants will still be able to return switches and assemblies in 2018, but no bounties will be paid to participants or the Department.

ELVS submitted its mercury minimization plan for review by the Department on September 27, 2009. On October 27, 2009, ELVS submitted a revised plan that addressed issues arising from the General Motors bankruptcy and reorganization. The Department reviewed the plan and provided ELVS with written comments on October 30, 2009. ELVS provided the Department with a revised plan on November 23, 2009 and the Department approved the plan on January 25, 2010.

As of December 31, 2017, 150 of 150¹ active facilities in Maryland have registered in the ELVS collection program.

¹ This may differ slightly from the registered number shown in the January 22, 2018 ELVS Manufacturer's Annual Implementation Report (Appendix A) due to the existence of out-of-business and duplicate facilities in the ELVS database.

Report of Required Information

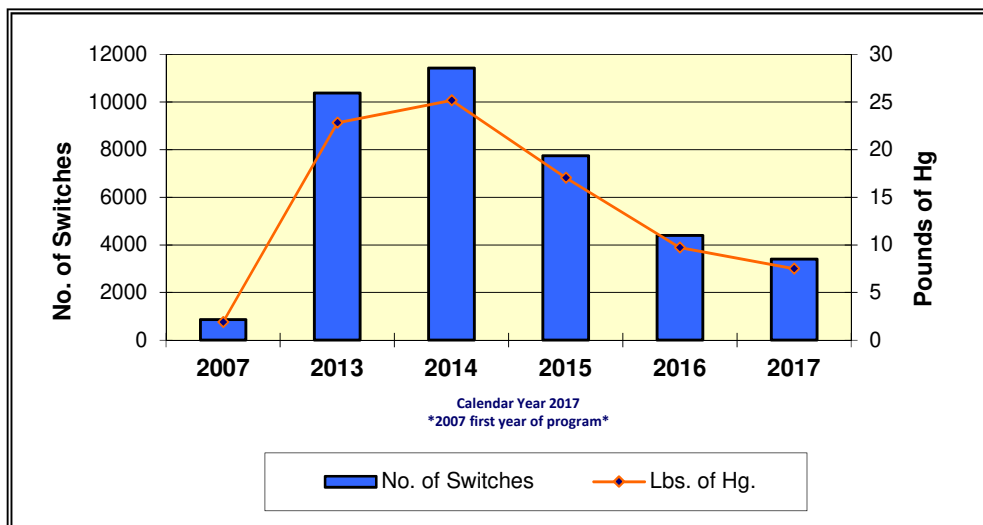

This section of the report presents information required by Section 6-905.5(j) of the Environment Article, Annotated Code of Maryland, to be reported to the General Assembly. The information is presented in the order it is listed in Section 6-905.5(j).

- Number of mercury switches and mercury switch assemblies recovered from vehicles:

From July 1, 2017 through December 31, 2017, the ELVS recycling contractor received 1,908 mercury switches (yielding 4.2 pounds of mercury) from Maryland vehicle recyclers and scrap processing facilities. This is an increase of 27.3% compared to the 1,499 mercury switches collected during the previous six months. Month-by-month data on the number of switches returned to ELVS from July 1, 2017 through December 31, 2017, are shown in the following table:

Month-Year	Number of Switches
Jul-2017	164
Aug-2017	881
Sept-2017	132
Oct-2017	178
Nov-2017	282
Dec-2017	271
TOTAL	1,908

From January 1, 2017 to December 31, 2017, 3,407 mercury switches, yielding 7.5 pounds of mercury, were returned to the ELVS recycling contractor from Maryland. Data over the lifetime of the program, from CY 2007 – 2017, is presented in the following chart and table:

Calendar Year	Number of Switches Collected	Pounds of Mercury Collected **
2017	3,407	7.50
2016	4,393	9.70
2015	7,745	17.04
2014	11,653	25.64
2013	10,376	22.83
2012	12,151	26.73
2011	11,011	24.22
2010	5,509	12.12
2009	10,052	22.11
2008	4,625	10.23
2007	860	1.89
TOTAL	81,782	180.01

** Per ELVS, 454.54 switches = 1 pound of mercury.

Appendix contains the ELVS Manufacturers' Implementation Report required to be submitted by vehicle manufacturers for the previous CY of 2017. Note that there is a lag between the time that participants remove switches from vehicles and the time that the switches are delivered to ELVS because it takes time to accumulate enough switches to fill the collection/shipping container. During each Department inspection, the facility is made aware that mercury switches cannot be kept on site for more than one year from collection, regardless of the number of switches collected, to remain in compliance with hazardous waste regulations, Code of Maryland Regulation (COMAR) 26.13.10.17 B(1), which references the "Universal Waste Rule" with respect to the storage of hazardous waste.

- Number of switches projected to be available for recovery:

The National Vehicle Mercury Switch Recovery Program (NVMSRP) Switch Retirement Model, available on the ELVS web page at http://elvsolutions.org/?page_id=1298, provides the following estimates for the number of end-of-life vehicle mercury switches available in Maryland through 2017:

Year	Estimated No. Switches Available from Vehicles Scrapped in Maryland
2007	61,000
2008	51,000
2009	51,000
2010	51,000
2011	48,000
2012	44,000
2013	41,000
2014	38,000

Year	Estimated No. Switches Available from Vehicles Scrapped in Maryland
2015	34,000
2016	31,000
2017	27,000
Total	477,000

- Capture rate of switch recovery achieved:

ELVS uses the Switch Retirement Model developed by the NVMSRP Measurement Committee to identify switch populations and estimate mercury switch retirement rates through 2017. The NVMSRP was developed through a collaborative effort involving the U.S. Environmental Protection Agency, states, environmental organizations, and several industry sectors. More information on the NVMSRP is available at http://elvsolutions.org/?page_id=8.

The Switch Retirement Model uses historic information on vehicle sales by state, estimates of vehicle scrappage rates as a function of vehicle age, and information on the average number of mercury switches per vehicle to estimate the number of switches expected to be in vehicles scrapped each year, by state.

The model estimates the total number of mercury switches installed in vehicles manufactured before automobile model year 2003 and sold in the United States to be 169,185,000. The 2002 model year was the last year that mercury switches were installed in vehicles. Most of the vehicles manufactured prior to 2003 containing these switches have already been taken out of service. The model estimates that 11,797,000 mercury switches nationally will be taken out of service from 2013 through 2017. The number of mercury switches available for collection from vehicles taken out of service in Maryland from 2013 through 2017 is estimated at 171,000. The model estimates that 27,000 mercury switches were available for collection from vehicles taken out of service in Maryland in calendar year 2017.

The Maryland Mercury Switch Model table on pages 7 and 8 indicates the approximate number of mercury switches available for recovery, by year, as estimated by the Switch Retirement Model.

To determine the capture rate (CR) in Maryland for the reporting period July 1, 2017 through December 31, 2017, the number of mercury switches available during this period was calculated as follows:

From July 1 to December 31, 2017, the number of mercury switches available was $27,000 \times (6/12) = 13,500$.

Therefore, the annual Capture Rate from July 1, 2017 through December 31, 2017, was:

$$\frac{\text{Number of Switches Returned}}{\text{Total Number of Switches Available}} = \text{Capture Rate} \therefore \frac{1,908}{13,500} = 0.1413 \text{ or } 14\%$$

Additionally, over the lifetime of Maryland’s program, from January 1, 2007 through December 31, 2017, the capture rate was:

$$\frac{\text{Number of Switches Returned}}{\text{Total Number of Switches Available}} = \text{Capture Rate} \therefore \frac{81,782}{477,000} = 0.1715 \text{ or } 17.2\%$$

There can be a significant lag time before a switch that has been removed is turned in for recycling. Also, economic concerns related to the recession may have reduced the number of switches available as vehicle owners have kept vehicles in operation longer. There may be some uncertainty in the model’s estimate of the number of switches available because the model assumes that a vehicle that was purchased in Maryland will be scrapped in Maryland. That does not take into account such factors as vehicles being taken out of state by persons who relocate and trade-in vehicles being sent out of state by new car dealers. However, this could be happening in other states as well, resulting in vehicles originally purchased elsewhere being scrapped in Maryland.

- Amount and use of funds paid into the State Recycling Trust Fund:

For the first six months of FY 2018 (*i.e.*, July 1, 2017 through December 31, 2017), the Department was paid \$1,482.00 by ELVS. As stated in the manufacturers’ mercury minimization plan, ELVS pays the State the \$1.00 required under the Act only upon receiving proper documents from program participants. The switch recovery plan the Department approved includes the statement “ELVS will further authorize the payment of \$1 for each *form verified* (emphasis added) mercury convenience light switch or mercury containing ABS assembly to the Maryland Department of the Environment.” The amount of money the State received from ELVS (\$1,482.00) vs. the number of switches received by ELVS (1,908) from vehicle recyclers and processing facilities reflects the challenges related to the submission of the proper documents. Also, once switches are shipped by a State participant in the program, the delay within ELVS for reimbursement of funds to the State may take between 60 and 90 days. This delay may result in mercury switches and assemblies counted during the fiscal year coming from switches collected during the previous year.

Highlights of Department Activities

Since July 1, 2016, all departmental activities related to the Mercury Switch Removal from Vehicles Act ended due to the sunset of the law on December 31, 2017. However, during the period covered by this report, mercury switches continued to be removed and collected from end-of life vehicles by recyclers and scrap processing facilities.

Subject: End-of-Life Vehicle Solutions Corporation "Manufacturer's Annual
Implementation Report"

Dear Mr. Mrgich,

The Annotated Code of Maryland Section 6-905.5(G) Mercury Switch Removal from Vehicles, Chapter 713 requires vehicle manufacturers to report annually to the Maryland Department of the Environment on the progress of their mercury minimization plan including:

- the number of mercury switches collected
- a description of the capture rate achieved
- a description of actions that may be implemented to improve the plan if a capture rate of at least 90% for the previous calendar year is not achieved
- the number of end-of-life vehicles containing mercury switches
- a description of how the mercury switches were managed
- a description of the costs of implementing the program

This report is provided by End of Life Vehicle Solutions Corporation on behalf of its member automotive companies. The participating members of ELVS are: FCA US LLC (formerly Chrysler Group LLC); Ford Motor Company; Mack Trucks Inc; Mercedes-Benz USA, LLC; Mitsubishi Motors North America, Inc; Navistar, Inc.; Nissan North America, Inc; PACCAR, Inc; Porsche Cars North America Inc.; Subaru of America, Inc; Toyota Motor Sales USA, Inc.; Volkswagen Group of America, Inc; Volvo Cars of North America; and Volvo Trucks North America. This report also includes switches from the former MLC (old GM).

Mercury Switches Collected

A total of 3,407 mercury switches were delivered to the ELVS recycling contractor from Maryland dismantlers during calendar year 2017, yielding 7.5 pounds of recovered mercury. There were 166 registered dismantlers, 39 of which submitted switches.

Mercury Switch Capture Rate

The estimated number of switches available for recovery in Maryland during 2017 was 27,000. The number of switches collected (3,407) yields an annual capture rate of 13% (14% for 2016).

Vehicle / Switch Estimates

ELVS uses the National Vehicle Mercury Switch Recovery Program (NVMSRP) Switch Retirement Model (www.elvsolutions.org/model.html) approved by the U.S. EPA and program partners to estimate mercury switch populations. The model was developed to identify switch populations and estimate mercury switch retirement rates through 2021. Therefore, the model focuses on mercury switch counts rather than vehicle counts.

The model estimates that the national total number of mercury switches historically manufactured in vehicles to be 169,185,000. Most of the vehicles containing these switches have already been scrapped, with an estimated 1,631,000 switches available for collection in today's national fleet in CY 2018. Maryland's portion of switches available for collection (CY 2018) is estimated to be 24,000.

For reference and according to the model, the number of mercury switches that were available nationally for recovery in 2017 was estimated to be 1,859,000 units. In Maryland 27,000 switches were available for recovery in 2017.

For your convenience, regularly updated collection information is available through our contractor's (US Ecology) website, <http://www.eqonline.com/services/ELVS-Mercury-Switch-Recovery-Program/annual-report.asp?year=all>, portions of which are now downloadable into Excel. This web-based data tracking system is part of ELVS' commitment to data accessibility, and will be available at least until 2021.

Processing of Vehicles

ELVS does not have data on the actual number of end of life vehicles processed. Our estimate is based on data from the latest Ward's Motor Vehicle Facts & Figures. According to Wards, the number of vehicles retired from use nationally in 2014 (the latest year given) is 11,047,000. The total registrations for Maryland for 2015 (again, the latest year given) are 3,995,609 out of 254,120,376 registered nationally. We estimate approximately 173,695 end of life vehicles were processed in Maryland in 2017 ($11,047,000 * (3,995,609 / 254,120,376)$). This does not include end of life vehicle imports or exports from the state or the effect of economic conditions (recessions, etc.). We realize that the number of vehicles retired annually varies year to year depending on many conditions. Our estimate is therefore based on the best available data.

Improvement Actions

- In 2017 ELVS participated in a number of regional and national automotive recycling events, some of which were attended by Maryland recyclers. In 2018, ELVS will continue to attend major events to encourage recycler participation and mercury switch collection.

- Based on a mutual desire to continue nationwide recovery of automotive mercury switches, auto and steel manufacturers entered into an agreement to continue the ELVS program past the expiration of the National Vehicle Mercury Switch Recovery Program (December 31, 2017). The ELVS program has been extended from January 1, 2018 through December 31, 2021. Services and program support provided in the past by ELVS will continue during the extension of the program.

Mercury Switch Management

Mercury switches received by ELVS are generally managed as follows:

- Dismantlers remove the switch assemblies and place them in the collection bucket, or extract and place the mercury pellets in the collection buckets. ABS assemblies with multiple pellets are returned as units.
- Once the buckets are full, the dismantler contacts US Ecology which pays for the shipping of the buckets to its facility in Michigan.
- US Ecology records the number of pellets and enters them into its database. The pellets are then sent to a retorting facility where the mercury is recycled.

Program Costs

The total implementation cost for the program including bounties, bucket charges, and program maintenance was \$22,105.42 for calendar year 2017.

If you have any questions or comments regarding this report, please contact me at brelvs@yahoo.com.

Sincerely,

Brian Rippon
