Re: Phase I and Phase II Environmental Site Assessment
Frederick Brick Works
Frederick County, Maryland

Dear Ms. Potember:

In accordance with our agreements, Geo-Technology Associates, Inc. (GTA) has performed a Phase I and Phase II Environmental Site Assessment (ESA) of the above-referenced property. The Site consists of approximately 64.6 acres located south of East South Street in the Frederick area of Frederick County, Maryland (the "Site"). The westernmost portion of the Site is separated from the remainder of the property by East Street. The Site contains asphalt and concrete covered areas, a construction storage area, disturbed land, open fields, and undeveloped woods. GTA understands that the Site will be developed for residential and commercial purposes, which will be serviced by publicly available water and sewer utilities. GTA's standard Phase I ESA scope of services was expanded to include methane screening.

We appreciate the opportunity to be of assistance on this project. Should you have any questions regarding this information, or should you require additional information, please contact the undersigned at your convenience.

Sincerely,

GEO-TECHNOLOGY ASSOCIATES, INC.

Craig L. Brune
Project Scientist

1.0 EXECUTIVE SUMMARY

Geo-Technology Associates, Inc. (GTA) has performed a Phase I and Phase II Environmental Site Assessment (ESA) of Frederick Brick Works (the "Site"). This Phase I ESA was performed in general accordance with ASTM International (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-13)*.

This Executive Summary is limited in scope and detail and is presented for the convenience of the reader. Do not rely on this Executive Summary for any purpose except that for which it was prepared. Please refer to the full report for details concerning the environmental condition of the Site, as well as the scope and limitations of this Phase I ESA. Rely only on the full report for information about the findings, recommendations, and other concerns.

The Site consists of approximately 64.6 acres located south of East South Street in the Frederick area of Frederick County, Maryland. The westernmost portion of the Site is separated from the remainder of the property by East Street. The Site contains asphalt and concrete covered areas, a construction storage area, disturbed land, open fields, and undeveloped woods. A former railroad easement crosses the northeastern portion of the Site. One portable 100-gallon above ground storage tank (AST) was observed on the northwestern portion of the Site. In addition, one apparent remnant groundwater monitoring well was identified on the north-central portion of the Site. No other ASTs, underground storage tanks (USTs), or groundwater monitoring wells were identified in association with the Site.

The northwestern portion of the Site historically contained the Frederick Brick Works facility, including several buildings and kilns, since at least 1873. This facility produced bricks and sold coal from the late 1800s until the 1940s. From the late 1940s until the early 2000s, the facility sold brick manufactured by others and coal. The former buildings were demolished in approximately 2019.

Clay for the brick manufacturing process was mined from the north-central, central, and southern portions of the Site. Some of these former borrow areas were utilized by the City of Frederick as a municipal dump from the 1890s through 1947. The municipal dump areas were located on and adjacent to the central portion of the Site. Additional fill materials were reportedly placed on the central and southern portions of the Site during the 1960s and 1990s.

Between 1998 and 2019, several prior environmental evaluations were performed on the Site. The majority of these evaluations concentrated on the northwestern portion of the site where the brick manufacturing facility had been located, and within the areas of reported fills.

In 1999 one 550-gallon gasoline UST and one 1,000-gallon gasoline UST and they were removed from the former brick manufacturing facility Site under Maryland Department of the Environment (MDE) Oil Control Program (OCP) supervision. Petroleum-impacted soil was identified in association with the 1,000-gallon UST, and this soil was excavated and bioremediated on-site. The MDE OCP has since closed the case (OCP Case No. 99-2763FR) associated with these UST removals. These USTs and associated OCP UST removal case were identified in a regulatory data base report in association with the Site.

Three groundwater monitoring wells were installed on the north-central and northeastern portions of the Site. The groundwater monitoring well observed during this evaluation appears to correspond to one of these wells. One of the wells did not yield water, but the other two wells were sampled and the volatile organic compounds (VOCs) methylene chloride and methyl-tert butyl ether (MTBE) was identified in one well at concentrations above the current MDE groundwater cleanup standards (GCS).

Test pits and soil borings identified fill throughout the Site. Little to no fill was identified on the northern, eastern (open fields) and northwestern (former Frederick Brick Works facility) portions of the Site. Fill materials mixed with construction debris was identified on the northwestern, north-central, and southern portions of the Site. Fill depths on the northwestern and north-central portions of the Site extended up to 9 to 10 feet below ground surface (bgs), while fills on the southern portion of the Site extended up to 34 feet bgs. Fill materials on the central portion of the Site consisted of soil mixed with municipal waste, ash, and brick; and was identified up to 16 feet bgs. Fill materials on the north-central portion of the site were identified as soil mixed with construction debris, municipal waste, ash, and brick; and was identified up to 15 feet bgs. Fill materials identified at the Site represent an environmental concern to the Site due to the potential methane generated by the breakdown of buried debris.

Sampling of the fill material has identified total petroleum hydrocarbons (TPH) diesel range organics (DRO), several metals (primarily arsenic, lead, and mercury), and PAHs (most notably benzo-a-pyrene) above the residential risk-based comparison value (RCV) for arsenic, the residential cleanup standards (RCS), or the anticipated typical concentrations (ATC) for soil in western Maryland.

In conjunction with a concurrent geotechnical evaluation, GTA converted 22 geotechnical borings into to gas monitoring probes (methane probes). During May, June, and July 2022; GTA performed three rounds of methane screening at the Site. Little to no methane was detected during these screening events. Methane was only detected during the first screening event in two methane probes on the central portion of the Site. These methane concentrations ranged from 2% and 4% of the lower explosive limit (LEL). Based on the field screening results, it does not appear that methane represents and environmental concern to the Site.

The surrounding vicinity currently and has historically contained residential and commercial developments. A federal and state environmental regulatory database report identified several sites of environmental concern in the surrounding vicinity. Based on their locations relative to the Site, several of the nearby regulatory sites may have contributed to the impacts previously identified on the Site.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Site, except for the following:

- Soil and groundwater impacts have been identified in association with the Site.

GTA recommends that these findings be reviewed with the Client's development team to evaluate potential ramifications to the future ownership, use, and redevelopment of the Site. This review should also address environmental conditions relative to regulatory involvement. Specifically, GTA

recommends that the information provided herein be submitted to the MDE Land Restoration Program for their review and development of a remedial plan between the ownership and development team, GTA, and the MDE.

Although not considered a REC, the Site contains a remnant groundwater monitoring well. GTA recommends that if the well is no longer needed, it should be properly abandoned in accordance with applicable state and local regulations.

Although not considered a REC at this time, several buildings were previously located on the Site property and are no longer present. Such former structures may have utilized USTs for the storage of heating oil or other products. GTA recommends that if buried wastes, USTs, or contaminated media are encountered during future site activities, such materials should be removed and an environmental evaluation of the area performed.

2.0 INTRODUCTION

2.1 General

GTA was retained by Greenberg Gibbons (“Client” or “User”) to prepare a Phase I Environmental Site Assessment, in conformance with ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E1527-13* of the Site in accordance with our Agreement dated February 10, 2022. GTA's standard Phase I ESA scope of services was expanded to include advancing soil borings, converting the borings to gas monitoring probes, and screening the gas monitoring probes in accordance with our Agreement dated April 5, 2022.

This report was prepared by GTA for the sole and exclusive use of the Client. Use and reproduction of this report by any other party without the express written permission of GTA is unauthorized, and such use is at the sole risk of that party.

2.2 Purpose

The purpose of this report is to identify RECs in connection with the Site, using the methodology defined by ASTM International in order for a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser defenses to CERCLA liability and/or to help understand potential environmental conditions that could materially impact the operation of the business associated with the Site. ASTM International defines a REC and related terms as follows:

Recognized Environmental Condition (REC): “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

Historical REC (HREC): “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.”

Controlled REC (CREC): “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.”

De minimis condition: “a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.”

2.3 Scope of Services

This Phase I ESA was performed and this report was prepared in general accordance with applicable standards and with a review of reasonably ascertainable data, as set forth in the *ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-13)*. The scope of services for this Phase I ESA generally included the following:

Records Review – Review of reasonably ascertainable current and historical records for the Site and site vicinity, including, but not limited to, a regulatory database report summarizing Federal and State environmental agency records; aerial photography; street directories; Sanborn® Fire Insurance Maps; property tax files; chain of title information for the Site (if provided by the Client or Site owner); physical setting documentation; and previous environmental reports.

Site Reconnaissance – Non-intrusive visual observations of the Site for indications of hazardous substances, petroleum products, ASTs, USTs, groundwater monitoring wells, polychlorinated biphenyl (PCB)-containing equipment, stained soil, stressed vegetation, pits, ponds, lagoons, structures, utilities, access roads, and similar features of potential environmental concern.

Interviews – Interviews (in person, via telephone, or via written request) with, but not limited to, relevant regulatory authorities and present and past Site owners, operators, or occupants, where relevant.

Report – Preparation of a Phase I ESA Report summarizing the information collected.

Considerations that were not reviewed as part of this Phase I ESA, and that are considered non-scope issues by ASTM E1527-13 and/or otherwise beyond the scope of this assessment, include, but are not limited to, asbestos-containing materials (ACMs), radon, lead-based paint (LBP), lead in drinking water,

wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality unrelated to subsurface releases of hazardous substances or petroleum products, biological agents, mold, water potability issues (e.g., nitrates, pH, turbidity, coliforms, etc.), other substances under naturally occurring conditions (e.g., metals such as arsenic), universal building wastes (e.g., mercury-containing switches or bulbs, PCB-containing light ballasts), and high voltage power lines. GTA's standard Phase I ESA scope of services was expanded to include advancing soil borings, converting the borings to gas monitoring probes, and methane field screening, as described later in this report.

2.4 Limitations

GTA's conclusions regarding the Site have been based on observations of existing conditions at the time of the site reconnaissance, an interpretation of reasonably ascertainable historical data sources, environmental data, professional experience in the area with similar projects, and generally accepted professional environmental practice under similar circumstances. Therefore, conclusions reached regarding the conditions of this Site do not represent a warranty that all areas within the Site are of a similar quality as may be inferred from observable site conditions, reasonably ascertainable historical data sources, or environmental data. Site soil vapor (methane) conditions were inferred from the result of field screening obtained at specific locations and on specific dates. These conditions may not remain consistent through the passage of time. Please be advised that as stated in the ASTM E1527-13 Standard, no environmental site assessment can wholly eliminate uncertainty regarding the potential for environmental liability in connection with the Site. GTA's evaluation and analysis are intended to reduce, but not eliminate, the potential for conditions that result in liability for the Client.

Please be advised that ASTM indicates that a Phase I ESA completed less than 180 days prior to the date of the property transaction is presumed to be valid. To satisfy the ASTM E1527-13 Standard, Phase I ESAs completed more than 180 days prior to the date of the property transaction are required to be updated.

The following limiting conditions/deviations should be noted with respect to this Phase I ESA. These limiting conditions/deviations are not necessarily exceptions to the ASTM E1527-13 Standard.

- In preparing this report, GTA has relied on certain information provided by federal, state, and local officials and other parties referenced herein, and on information contained in the files of governmental agencies, that were readily available to GTA at the time of this assessment. Although there may have been some degree of overlap in the information provided by these various sources, GTA did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this assessment.
- Observations were made of the Site as indicated in this report. Where access to portions of the Site was unavailable or limited, GTA renders no opinion as to the presence of petroleum products or hazardous substances in that portion of the Site. In addition, GTA renders no opinion as to the presence of petroleum products or hazardous substances where direct

observation of the ground surface is obstructed by objects or materials, including vegetation and snow, covering these surfaces.

- The Site boundaries were not marked at the time of GTA's site visit. GTA estimated the Site boundaries using existing site features, the tax map information described in Section 3.1, aerial photographs, and/or site plans, if available.
- As part of this assessment, GTA submitted requests for information via the Freedom of Information Act (FOIA) to various governmental agencies. As of the preparation date of this report, these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these FOIA requests.
- As part of this assessment, GTA requested information from the current Site owner, the Client, and other entities. As of the preparation date of this report, these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these entities.
- Several boring locations were relocated during the Phase II ESA evaluation due to conditions observed on the Site.

2.5 Significant Assumptions

As part of this Phase I ESA, GTA has obtained data from various sources (e.g., historical documents, regulatory information, site drawings, interviews with individuals familiar with the Site and regulatory representatives). GTA relies on this information in forming a professional opinion and assumes that the information is accurate and correct. GTA shall not be responsible for conditions or consequences arising from incorrect data sources or relevant facts that were concealed, withheld or not fully disclosed at the time this report was prepared. Unless otherwise noted, GTA assumes that the user has requested this Phase I ESA to qualify for a "landowner liability protection" (LLP) to CERCLA liability.

Groundwater flow and depth, unless otherwise specified by on-site well data or well data from the Site or nearby sites, are inferred from contour information depicted on the USGS topographic map(s).

GTA assumes the Site has been correctly and accurately identified by the Client, designated representative of the Client, Site contact, Site owner, and Site owner's representatives.

A number of parties such as third-party vendors, government agencies, and the Site owner may have provided information for this assessment. The ASTM E1527-13 Standard allows the consultant to rely on the information gathered without independent verification, unless it is obvious that certain information is incorrect. Unless noted in the report, GTA assumed the information supplied by third parties to be correct.

2.6 Data Gaps

ASTM defines a "data gap" as a lack of or inability to obtain information required by the Phase I ESA standard despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by the Phase I ESA, including, but

not limited to, the site reconnaissance and interviews. Common data gaps include the lack of access to some structures, an inability to interview key site managers, and time gaps in the historical use information. Significant data gaps are those that affect the ability of the environmental professional to identify RECs. Significant data gaps were not identified as part of this Phase I ESA.

2.7 Qualifications

I, Kevin P. Plocek, declare that, to the best of my professional knowledge and belief, I meet the definition of an Environmental Professional as defined in Part 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the “All Appropriate Inquiries” in general conformance with the standards and practices set forth in 40 CFR Part 312. The qualifications of the environmental professionals who performed this Phase I ESA are available to the Client upon request.

3.0 SITE AND VICINITY DESCRIPTION

3.1 Site Location, Parcel Description, and Site Improvements

The Site consists of approximately 64.6 acres located south of East South Street in the Frederick area of Frederick County, Maryland. The westernmost portion of the Site is separated from the remainder of the property by East Street. Please refer to the maps provided in Appendix A. According to online tax information obtained from the Maryland Department of Assessments and Taxation (MDAT), the Site comprises the parcels summarized in the following table.

Tax Account Number	Owner	Address	Year Structure Built	Land Area (Acres)
02-044110	Brick Works Development, LLC	184 East South Street	No structures	25.51
02-044129	Brick Works Development, LLC	East South Street	No structures	30.55
			Total Acreage	56.06

It should be noted that information provided by the Client indicates the Site acreage is 64.6 acres, not the referenced 56.06 acres in the MDAT information. The MDAT information references the property as Parcel 962, and maps a portion of Parcel 962 south of Monocacy Boulevard. This portion of Parcel 962 is not included in the scope of this ESA. Based on the reviewed information, it is unclear if the 64.6 acres includes the additional acreage south of Monocacy Boulevard.

GTA was provided with a copy of Conceptual Master Plans (Plans) of Frederick Brick Works, prepared by BCT Architects (BCT), and dated March 4, 2022. The BCT Plans present nine proposed development schemes, of which the Client has indicated that Scheme A is the most likely development scenario. Scheme A indicates that the eastern and western portions of the Site are proposed to be developed with townhomes. The south-central portion of the Site is proposed to be developed for retail purposes. The central and north-central portions of the Site are proposed to be developed with a hotel, apartments, and senior housing. These developments will be accessed from East Street or several

additional interior roadways. It is GTA’s understanding that the Site will be serviced by publicly available public water and sewer utility services.

3.2 Physical Setting

The Site’s physical setting, based on the Site reconnaissance and/or the referenced physical setting sources, is summarized below.

Soil Series	Source: U.S. Department of Agriculture (USDA) Web Soil Survey
AfB: Adamstown-Funkstown complex BtB: Buckeystown loam BtC: Buckeystown loam UrC: Urban land Note: Urban land includes areas where the original soil material has been disturbed by construction or other human activities, and may include areas where fill has been added.	
Topography	Source: United States Geological Survey (USGS) Topographic Quadrangle Map (Frederick, MD)
Generally sloping downward from the central portion of the Site in each cardinal direction. Site elevations range from greater than 300 feet above mean sea level (MSL) on the central portion of the Site, to less than 300 feet above MSL on the northern, eastern, southern, and western portions of the Site.	
Geology, Hydrogeology, and Surface Water	Source(s): Maryland Geological Survey <i>Geologic Map of Frederick County, Maryland</i>; USGS Topographic Quadrangle Map (Frederick, MD)
Physiographic Province: Frederick Valley Formation(s): Frederick Limestone: The formation typically consists of blue, slabby, thin-bedded limestone and minor shale. Groundwater Flow Direction: Based on the observed and/or mapped local topography, the shallow groundwater is assumed to flow away in each cardinal direction from the central portion of the Site. Shallow groundwater flow may be highly variable based on a number of factors, and no site-specific groundwater flow data was obtained or reviewed. Surface Water: Pondered water that appeared to be the result of prior site excavation, was observed on the northern portion of the Site. Carroll Creek, a tributary the Monocacy River is located approximately 1,000 feet north of the Site. A storm water retention pond is located south, beyond Monocacy Boulevard.	

4.0 SITE RECONNAISSANCE

Craig Brune of GTA performed the site reconnaissance on March 8, 2022. Limitations that may have affected GTA’s ability to visually observe Site conditions are noted below.

Limitation	Yes	No	Description
Dense Vegetation	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Portions of the Site were densely vegetated, limiting GTA personnel’s observations.
Locked or Inaccessible Structures	<input type="checkbox"/>	<input checked="" type="checkbox"/>	

Limitation	Yes	No	Description
Snow Cover	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Other	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Pallets of mulch, bricks, and concrete were located at the northwestern portion of the Site, limiting GTA personnel's observations.

4.1 Site Description

The Site is accessed by an unimproved roadway that enters the Site from East South Street. The northwestern and northeastern portions of the Site contain asphalt and concrete covered areas. A construction storage area is located on the north-central portion of the Site, directly south of a Verizon facility. Disturbed land and homeless encampments were observed throughout the central and southern wooded sections of the Site. The majority of the eastern portion of the Site contains open land, with the exception of a former railroad bed that has become overgrown. Wooded land and a gravel covered area is located at the western portion of the Site, beyond East Street. Photographs taken during GTA's site visit are presented as Appendix B.

4.2 Site Occupants and Operations

The northwestern portion of Site is currently utilized as a mulch distribution facility. Trucks are loaded and unloaded utilizing an onsite forklift. The mulch facility is contained to the northwestern portion of the Site, east of East Street and is surrounded with fencing.

A construction storage yard is located on the north-central portion of the Site. The construction yard contains of stockpiles of concrete, asphalt, and stone; dumpsters; and paving equipment.

In addition, portions of an adjacent Schuster concrete facility encroach on the northeastern portion of the Site. This area primarily contains paved and gravel covered areas, and stockpiles of sand and gravel utilized to produce concrete.

4.3 Structures and Utilities

GTA personnel observed bricks, concrete, and remnant slabs and foundations of former buildings that had previously been located on the northwestern portion of the Site. GTA personnel did not observe obvious indications of existing or previous structures on the remainder of the Site.

Utilities that service the Site are summarized below.

Utility	Description
Water	Publicly available water utilities are available along East South Street.
Sewer	Publicly available sewer utilities are available along East South Street.
Heating/Cooling	The Site is not connected to heating or cooling utilities since no structures are currently located on the Site.
Stormwater	Sheet runoff generally flows topographically to the southwest, south, and southeast. Some topographic lows (i.e., depressions) exist within the Site.

Utility	Description
Electric	Overhead power lines run along the northwestern and northeastern portions of the Site.

4.4 Site Conditions

The following table summarizes the site reconnaissance observations and/or items that were identified (or suspected) based on interviews and the reviewed records.

Category	Item Description	Observed, Identified, or Suspected
Storage Tanks and Vessels	Aboveground Storage Tanks	Yes, see below
	Underground Storage Tanks	No
Chemical or Waste Storage/Disposal	Drums or Other Containers	Yes, see below
	Floor Drains, Trenches, Sumps, and Pits	No
	Oil/Water Separator	No
	Waste Lagoons	No
Electrical Transformers/PCBs	Pole-mounted Transformers	Yes, see below
	Pad-Mounted Transformers	Yes, see below
	Elevators	No
	Other Equipment	No
Solid Waste and Stockpiles	Landfilling or Buried Waste	Yes, see below
	Dumping or Disposal/Debris Areas	Yes, see below
	Dumpsters	Yes, see below
	Fill Material	Yes, see below
	Soil Stockpiles	Yes, see below
Known or Suspected Release of Hazardous Substances or Petroleum Products	Stained Soil	No
	Stained Pavement or Other Surfaces	Yes, see below
	Stressed Vegetation	No
	Pools of Liquids	No
	Other	No
Other Site Features	Monitoring Wells	Yes, see below
	Hydraulic Lifts	No
	Pungent or Noxious Odors	No
	Petroleum Pipeline (i.e., Markers)	No
	Other	Yes, see below

Aboveground Storage Tanks: GTA personnel observed a new, unused 100-gallon steel fuel storage tank stored on a wooden pallet on the northwestern portion of the Site. The storage tank was empty. No spills or staining was observed in the area surrounding the storage tank, which will likely be placed in the back of a pickup truck to fuel equipment at off-site job sites.

Drums or Other Containers: GTA personnel observed one overturned corroded and empty 55-gallon drum in an area of ponded water on the north-central portion of the Site. An additional plastic 55-gallon drum and several smaller containers ranging in size from several quarts to five gallons were observed on the northwestern portion of the Site, in the area of the mulch business. These containers appeared to have contained automotive lubricants. No spills or staining were observed in proximity to the drums or containers.

Transformers: GTA personnel observed a pole-mounted electrical transformer near the northern portion of the Site, along East South Street. Pad mounted transformers were observed adjacently south of the Site along Monocacy Boulevard. The pad-mounted transformers appeared to have been located off-site, along Monocacy Boulevard. GTA personnel did not observe obvious signs of leaks or spills in the vicinity of the transformers.

Landfilling or Buried Waste: As discussed in subsequent sections of this report, prior evaluations have identified portions of the Site that have been utilized as a municipal landfill and construction debris has also been placed on various portions of the Site.

Dumping or Disposal/Debris Areas: GTA personnel observed various areas of surficial dumping on the Site. Tires, mattresses, and discarded household refuse was observed in several areas on the central portion of the Site. GTA personnel did not observe drums or other containers suspected of containing petroleum products or hazardous substances among the debris.

Dumpsters: GTA personnel observed two dumpsters located at the construction storage area on the north-central portion of the Site. One dumpster contained construction debris including concrete and rebar.

Fill Material: Observed topographic changes on several areas of the Site are suspected to contain fill materials. Observations of the suspected fill material was vegetated, limiting GTA's observation of the suspected fill material. As discussed in subsequent sections, fill material ranging up to 34 feet below ground surface (bgs) has been identified on the Site. This fill material reportedly contains soil mixed with municipal waste and construction debris.

Stockpiles: GTA personnel observed several stockpiles of construction materials including concrete, soil, stone, and asphalt located at the construction storage area on the north-central portion of the Site.

Stained Pavement: GTA personnel observed areas of stained pavement at the construction storage area in the central western portion of the Site. The staining appears to be a result of minor leaking of fluids from construction equipment.

Monitoring Wells: GTA personnel observed a vertical metal pipe on the north-central portion of the Site. The metal pipe contained two, approximately 2-inch diameter PVC pipes. No liquid was observed in the metal pipe or the two PVC pipes. The observed location of these pipes corresponds to the location of one of the groundwater monitoring wells discussed in Section 6.3.

Other: A forklift associated with the mulch business was observed on the northwestern portion of the Site. Asphalt paving equipment was observed in the construction storage yard on the north-central portion of the Site.

4.5 Surrounding Land Use

During the site reconnaissance, GTA personnel observed, to the extent practical, conditions on the land adjoining the Site and within an approximate ¼-mile radius of the Site. The following is a summary of adjoining land usage.

Direction	Surrounding Observations
North	Griffith Energy Services, Inc., a Verizon facility, Southern States, Frederick Supply, Carrol Creek Refinishing, Schuster Concrete, and East South Street followed by several automobile repair facilities and other commercial and residential properties
South	Monocacy Boulevard followed by a stormwater management pond and a quarry
East	Farmers Cooperative Association and a contractors storage yard
West	Residential properties, East Street, athletic fields, and agricultural fields

The majority of the commercial developments in the site vicinity are located along the East South Street corridor, north, northwest, and east of the Site. Several of the sites located adjacently north of the Site utilize ASTs for the storage of petroleum or silos associated with farming or construction materials. Additional information regarding the site located adjacently north is presented in Section 7.1.

GTA personnel did not observe obvious indications of releases (i.e., strong odors, stained surfaces, or stressed vegetation) of petroleum products or hazardous substances on the land immediately adjacent to, and topographically upgradient of, the Site. Accordingly, surficial drainage from upgradient sources is unlikely to have adversely affected the environmental condition of the Site.

5.0 HISTORICAL REVIEW

5.1 Historical Maps

GTA obtained Sanborn Fire Insurance Maps from EDR for the Site and vicinity. The maps provided pertained to the northwestern portion of the Site and were reviewed chronologically and significant land use changes that were observed are described below:

Year	Site	Adjoining and Surrounding Properties
1892	Depicted as Frederick Brick Works. Four kilns, a coal fired boiler, railroad tracks, an office, a shed, and clay sheds are depicted.	Not depicted
1897	Depicted as The Fredrick Brick Works. Six kilns, two coal fired boilers, a coal storage area,	Not depicted

Year	Site	Adjoining and Surrounding Properties
	railroad tracks, clay sheds, and several buildings are depicted.	
1904	Depicted as The Frederick Brick Works. Thirteen kilns, a coal storage area, railroad tracks, three fuel oil fired boilers, an oil storage house, and several buildings are depicted.	Not depicted.
1911	Similar to previous drawing.	Not depicted.
1922	A brick shed is depicted as having been removed.	Not depicted.
1930	A gasoline tank is depicted to the south of the office building.	Not depicted.
1934	An additional gasoline tank is depicted to the northeast of the oil storage house. The boilers are not depicted.	Not depicted.

GTA reviewed historical topographic maps maintained by NETR, which included topographic maps from the years 1909, 1913, 1917, 1921, 1922, 1931, 1938, 1939, 1942, 1943, 1944, 1954, 1965, 1972, 1980, 1986, 1994, 2014 and 2016. The conditions observed on the topographic maps were generally consistent with those observed on the reviewed aerial photographs discussed below.

5.2 Aerial Photographs

In an effort to assess historical land use practices on the Site and in the vicinity, GTA reviewed historical aerial photographs obtained from Environmental Data Resources, Inc. (EDR). Copies of the 1943 and 2019 aerial photographs are included in Appendix A. The aerial photographs were reviewed chronologically, and significant land use changes that were observed are described below:

Year	Site	Adjoining and Surrounding Land
1943	Agricultural on the eastern portion of the Site. Wooded and disturbed land on the north-central, central, and southern portion of the Site. Several structures and kilns associated with the Frederick Brick Works facility are located on the northwestern portion of the Site. A rail line crosses the northeastern portion of the Site.	Disturbed area to the south. An unimproved roadway from the Site leads to the disturbed areas. Disturbed land to the east. Several structures appear at the Griffin Energy Services facility.
1958, 1959	Similar to the previous aerial photograph reviewed.	Similar to the previous aerial photograph reviewed. Several disturbed areas are no longer present.
1970, 1974	Similar to the previous aerial photograph reviewed. Disturbed land appears adjacent south. Central portion appears to be vegetated.	Similar to the previous aerial photograph reviewed. Several ASTs appear at 580 East South Street.

Year	Site	Adjoining and Surrounding Land
1981	Similar to the previous aerial photograph reviewed. Additional vegetation on the southern portion of the Site. Additional disturbed land appears south of the Verizon facility.	Similar to the previous aerial photograph reviewed. Further development appears at 520 East South Street including several ASTs. Verizon facility developed.
1988	Similar to the previous aerial photograph reviewed. An unimproved roadway appears at the north-central portion of the Site.	Similar to the previous aerial photograph reviewed.
2005	Similar to the previous aerial photograph reviewed. Land clearing appears at southwestern portion of the Site.	Similar to the previous aerial photograph reviewed. Disturbed land appears south and southeast of the Verizon facility.
2007, 2009	Similar to the previous aerial photograph reviewed. Additional disturbed land and stockpiles appear to the south of the Verizon facility.	Similar to the previous aerial photograph reviewed. Monocacy Boulevard and East Street under construction.
2011, 2013, 2015	Similar to the previous aerial photograph reviewed.	Similar to the previous aerial photograph reviewed.
2017, 2018	Similar to the previous aerial photograph reviewed.	Similar to the previous aerial photograph reviewed.
2021	Generally similar to the previous aerial photograph reviewed. All buildings appear to have been removed to their foundation.	Similar to the previous aerial photograph reviewed.

5.3 Property Title Information

The Client provided GTA with a Commitment for Title Insurance, dated February 8, 2022, pertaining to the Site. This document included references to several property deeds, indicating that the eastern and western portions of the Site have been owned by Frederick Brick Works since 1891 and 1912. Prior to 1912, the Hauer, Baumgardner, Potts, Keller, Doll, Schley, Rigney, and Nelson families were identified as the prior owners as early as 1816. A railroad right-of-way was identified on the eastern portion of the Site.

5.4 City Directories

Based on the availability of other historical resources summarized herein, no city directories were reviewed as part of this assessment.

6.0 USER-PROVIDED INFORMATION AND INTERVIEWS

GTA requested that the User complete a User Questionnaire. The User returned the questionnaire indicating the following:

User's Knowledge	Yes	No
Environmental liens that are filed or recorded against the Site. <i>Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the Site under federal, tribal, state, or local law?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Activity and use limitations (AULs) that are in place on the Site or that have been filed or recorded against the Site. <i>Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions, or institutional controls that are in place at the Site and/or have been filed or recorded against the Site under federal, tribal, state or local law?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Specialized knowledge or experience of the person seeking to qualify for Landowner Liability Protection. <i>Do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Relationship of the purchase price to the fair market value of the Site if it were not contaminated. <i>Do you have reason to believe that the purchase price of the Site is lower than the fair market value due to the known or suspected presence of contamination?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Commonly known or reasonably ascertainable information about the Site (40 CFR 312.30). <i>Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,</i> a) <i>Do you know the past uses of the property?</i> b) <i>Do you know of specific chemicals that are present or once were present at the property?</i> c) <i>Do you know of spills or other chemical releases that have taken place at the property?</i> d) <i>Do you know of any environmental cleanups that have taken place at the property?</i>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
The degree of obviousness of the presence or likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation. <i>Based on your knowledge and experience related to the Site, are there any obvious indicators that point to the presence or likely presence of releases at the Site?</i>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

The Client responded affirmatively to two items on the User Questionnaire. Specifically, the Client indicated, "My knowledge of the Site is limited to review of previous environmental site assessments." A copy of the completed User questionnaire is included in Appendix C.

6.1 Title and Judicial Records for Environmental Liens/Activity Use Limitations

Per ASTM E1527-13 Section 6.2, the User is required to provide and/or report to the environmental professional any title and judicial records for environmental liens/activity use limitations (AULs) associated with the Site. The environmental professional per the ASTM practice is not responsible to undertake a review of recorded land title records and judicial records for environmental liens or AULs.

Title records and information were not provided to GTA by the User. The User did not request GTA to coordinate with a title company or title professional to undertake a review of Recorded Land Title records and judicial records for environmental liens or AULs.

6.2 Interviews

On March 18, 2022, GTA personnel interviewed Mr. Clayton Minnick, a representative of Frederick Brick Works, Inc. and Brick Works Development, LLC. Mr. Minnick indicated that the Site has been utilized by Frederick Brick Works, a brick manufacturer, since the late 1890s. According to Mr. Minnick, the majority of the brick manufacturing operation was located on the northwestern portion of the property. Mr. Minnick indicated that portions of the property were surface mined for clay to utilize in the brick manufacturing process. According to Mr. Minnick, these excavated areas were either filled with municipal wastes or soil mixed with construction debris. Mr. Minnick indicated that the buildings formerly located on the northwestern portion of the Site were recently demolished, and no additional buildings are located on the Site. According to Mr. Minnick, the area where these buildings were previously located is currently utilized by a mulch distribution company. Mr. Minnick indicated that concrete and soil stockpiles located on the north-central portion of the Site are remanent from a contractor who previously leased the area as a storage yard. According to Mr. Minnick, fill operations have ceased on the property, and the former fill areas have been overgrown. Mr. Minnick indicated that the eastern portion of the property has historically been utilized for agricultural purposes, and a former rail line crossed that portion of the Site. According to Mr. Minnick, a small area on the northeastern portion of the Site has been leased to Schuster Concrete for the storage of raw materials needed to produce concrete. Mr. Minnick was not aware of existing ASTs, USTs, or groundwater monitoring wells associated with the Site.

Mr. Minnick indicated that several prior environmental evaluations have been performed on the Site; however, he was not aware of significant environmental impacts identified during these evaluations. Mr. Minnick referenced many of the prior reports summarized in Section 6.3. Mr. Minnick indicated that at least one UST was removed from the northwestern portion of the property in the 1990s. According to Mr. Minnick indicated that numerous evaluations have been performed within the former surface mining/fill areas of the Site. Please refer to Section 6.3 for additional information regarding these evaluations.

6.3 Previous Reports

GTA requested copies of previous Phase I ESAs or similar environmental reports from the Client. The Client supplied GTA with copies of prior environmental reports of the Site. In addition, GTA previously acquired prior environmental information regarding the Site during other evaluations performed in the area. These prior evaluations included:

- **UST Removal Report; Frederick Brick Works**, prepared by Bay Environmental Corporation (Bay), on behalf of Frederick Brick Works, Inc., dated June 4, 1999;
- **Phase I Environmental Site Assessment and Limited Phase II Environmental Investigation Draft Report**, prepared by Bay, on behalf of Frederick Brick Works, Inc., dated August 30, 2000;
- **Subsurface Soil Investigation East Street Extension**, prepared by KCI Technologies, Inc., on behalf of Maryland State Highway Administration, dated July 11, 2001;
- **Fill Areas Drawing Notes**, prepared by HydroTerra, dated January 25, 2002;

- **Environmental Inspection of Cline Fill**, prepared by Hydro-Terra, Inc, on behalf of Frederick Brick Works, Inc., dated March 17, 2005;
- **Phase II environmental inspection of former clay pit (Site) adjacent to Southern States Cooperative**, prepared by Hydro-Terra, Inc., on behalf of Frederick Brick Works, Inc., dated April 3, 2006;
- **Environmental Approach and Associated Cost**, prepared by Hydro-Terra, Inc., on behalf of The Wormald Companies, dated December 26, 2006;
- **Phase I Environmental Site Assessment of The Frederick Brick Works Property of East South Street**, prepared by Hydro-Terra, Inc., on behalf of The Frederick Brick Works, Inc., dated April 23, 2007;
- **Subsurface Exploration, Environmental and Geotechnical Study**, prepared by Specialized Engineering, on behalf of Foulger-Pratt Development, LLC, dated June 25, 2019.

These evaluations generally included the Site, and were performed on a larger property or portions thereof that included the Site, portions of East Street and Monocacy Boulevard, and land south of Monocacy Boulevard. Information pertinent to the Site is summarized below.

These reports indicated that the Site had been occupied by the Benjamin Franklin Winchester Brickworks (later know as Frederick Brick Works) since at least 1873. The main brick manufacturing operation was located on the northwestern portion of the Site. Numerous buildings were located on the northwestern portion of the Site, including several kilns fired by coal. Coal was transported to the Site via rail, and a rail line was identified crossing the northeastern portion of the Site and railroad siding entered the northwestern portion of the Site. Coal was also reportedly stockpiled on the northwestern portion and sold for private use. Sanborn Maps identified two gasoline tanks on the northwestern portion of the Site. These tanks correspond to two USTs that were removed from the former Frederick Brick Works facility. Additional information concerning these USTs is presented below. As part of the brick manufacturing process, clay and other raw materials were mined from portions of the Site. Information provided in the referenced reports indicated that some of these former borrow areas were utilized by the City of Frederick as a municipal dump from the 1890s through 1947. These municipal dump areas were identified on and adjacently south of a Verizon facility located north of the north-central portion of the Site. By the 1940s, the former Frederick Brick Works facility only sold coal and bricks manufactured by others. Additional fill materials were reportedly placed on the central and southern portions of the Site during the 1960s and 1990s. The most recent fill activities were reportedly conducted by the Richard F. Kline Company. Mismanagement of sediment erosion control efforts during fill operations reportedly resulted in a sinkhole on the southern portion of the property. However, it is unclear if this sinkhole was located on the southern portion of the Site, or on portions of the property evaluated that are no longer associated with the Site.

In 1998, three groundwater monitoring wells were installed at the Site. Two wells were installed on the north-central portion of the Site, south of the existing Verizon. The third well was installed on the northeastern portion of the Site, near the former rail line. One of the wells on the north-central portion of the Site did not yield water. The remaining two wells were installed at depths of 45 feet below ground surface (bgs) (remaining north-central well), and 70 feet below ground surface (northeastern

well). Depth to water ranged from approximately 10 feet bgs (north-central well) to 28 feet bgs (northeastern well). In 1999, these wells were sampled for polychlorinated biphenyls (PCBs), pesticides, metals, volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). PCBs and pesticides were not reported above the laboratory detection limits, and metals and SVOCs were not reported above the applicable regulatory standards. The VOCs methylene chloride and methyl-tert butyl ether (MTBE) were identified in the well on the northeastern portion of the site, at concentrations above the current MDE groundwater cleanup standards (GCS). It should be noted that methylene chloride is a common laboratory artifact. Other petroleum constituents and tetrachloroethylene were also identified in the well on the northeastern portion of the Site, at concentrations below the GCS.

In 1999, 30 test pits were performed on the northwestern, central, and southern portions of the Site. These test pits were either excavated to the depth of the underlying bedrock or to the maximum reach of the excavator. Samples were collected from eight test for the analysis of PCBs, pesticides, metals, VOCs, and SVOCs. PCBs and pesticides were not reported above the laboratory detection limits, and VOCs were not reported above the applicable regulatory standards. Arsenic and SVOCs, most notably benzo-a-pyrene, were detected above the regulatory comparisons used at the time of the evaluation. However, it should be noted that the arsenic concentrations were below the current residential risk-based comparison value (RCV) for arsenic (10.1 mg/kg). The test pits identified trash and ash mixed with soil primarily on the north-central portion of the Site, proximate to the current Verizon facility. Additional fill materials that included construction debris mixed with soil was identified on the central and southern portions of the Site.

In 1999, a geophysical survey confirmed the presence of the two USTs referenced above (one 550-gallon gasoline UST and one 1,000-gallon gasoline UST) and they were removed from the Site under MDE OCP supervision. The 1,000-gallon UST was empty at the time of removal, and the 550-gallon UST contained oily water. Liquids were removed from the 550-gallon UST, and both USTs were removed. No indications of impacts were identified in association with the 1,000-gallon UST; therefore, soil sampling was not required by the MDE. Photoionization detector (PID) screening of soils from the 550-gallon UST excavation identified screening values over 1,000 parts per million (ppm). The impacted soil from the 550-gallon UST excavation was reportedly excavated and bioremediated elsewhere on the Site. Additional information regarding the bioremediation area was not provided in the reviewed information. Both UST locations were backfilled with soil excavated from elsewhere on the Site. The MDE OCP has since closed the case (OCP Case No. 99-2763FR) associated with these UST removals.

In 2001, several borings were performed along East Street, which currently separates the westernmost portion of the Site from the remainder of the property. These borings identified fill up to 20 feet in depth and similar to that described in the 1999 test pit evaluation. Four soil samples were collected from the borings for analysis of polyaromatic hydrocarbons (PAHs), metals, and total petroleum hydrocarbons (TPH). PAHs were either not detected above the laboratory reporting limits, or below the applicable comparison values. TPH was identified at concentrations above the current MDE residential cleanup standards (RCS) at several locations. Arsenic, lead, and mercury were identified above the RCV or RCS; however, toxic characteristic leaching procedure (TCLP) did not indicate that these metals concentrations would be hazardous in a waste disposal scenario.

In 2002, information obtained during prior evaluations of the Site were utilized to extrapolate fill depths throughout the Site. Little to no fill was identified on the northern, eastern (open fields) and northwestern (former Brick Works facility) portions of the Site. Fill materials mixed with construction debris was identified on the northwestern, north-central, and southern portions of the Site. Fill depths on the northwestern and north-central portions of the Site extended up to 9 to 10 feet bgs, while fills on the southern portion of the Site extended up to 34 feet bgs. Fill materials on the central portion of the Site consisted of soil mixed with municipal waste, ash, and brick; and was identified up to 16 feet bgs. Fill materials on the north-central portion of the site (directly south of the Verizon facility) were identified as soil mixed with construction debris, municipal waste, ash, and brick; and was identified up to 15 feet bgs.

In 2005, 29 additional test pits were performed at the Site, within areas of previously identified fill. Three composite soil samples were obtained from the test pits. Arsenic and lead concentrations were identified above the current RCV or RCS.

In 2006, surficial soil sampling was conducted on the north-central portion of the Site, southwest of the existing Southern States facility due to surficial water from the Southern States facility encroaching onto the Site. No environmental impacts were identified.

In 2019, 45 test pits and 31 soil borings were performed across the Site. The subsurface explorations generally confirmed the depth and composition of the fill material identified on the Site during prior evaluations. 39 soil samples were obtained from the test pits for analysis of TPH diesel range organics (DRO), metals, and PAHs. Each of these constituents was identified at locations on the north-central, central, and southern portions of the Site, at concentrations above the RCV or RCS.

Several of the prior reports made mention of the potential occurrence of methane at the Site; however, to date methane has not been evaluated.

7.0 REGULATORY REVIEW

7.1 Regulatory Database Search

GTA retained an environmental database search company to perform a search of federal, state, and tribal environmental regulatory agency databases for sites identified within the approximate minimum search distance specified by ASTM *Standard Practice for Environmental Site Assessments E1527-13*. The two tables below summarize the regulatory database searches required by ASTM, followed by GTA's summary of the results. A copy of the regulatory database report is provided in Appendix D. The databases referenced in the attached report may not directly match those required by ASTM, but were provided by the database search company intending to match the ASTM database search requirements.

GTA attempted to field-verify the locations of the identified regulatory sites. The regulatory database report also includes a list of orphan or unmappable sites, which were not plotted in the regulatory database report due to insufficient address and/or geographic coordinate information. GTA reviewed

the list of orphan/unmappable sites and based on the descriptions provided, attempted to verify if any are located within the specified search radii. Therefore, the sites discussed in this section may be a subset of those contained in the regulatory database report.

GTA's summary of the identified regulatory sites provided below may be limited to distances that are less than the ASTM standard search distances considering local geologic or hydrogeologic conditions, the density of the identified regulatory sites, the availability of public water, or other factors.

Note that the regulatory database report may include various records that are not specifically required by the ASTM Standard. If non-ASTM databases are considered relevant to this Phase I ESA, they are discussed later in this section.

FEDERAL ASTM STANDARD DATABASES SEARCHED		
Database	Description	ASTM Search Distance
NPL	National Priority List. Subset of CERCLIS. Sites for priority cleanup under the Superfund program.	1 mile
Delisted NPL	Delisted National Priority List sites	½ mile
SEMS	Superfund Enterprise Management System (formerly CERCLIS). Sites that are proposed for or on the NPL, or in the screening or assessment phase for possible inclusion on the NPL.	½ mile
SEMS-ARCHIVE	Formerly CERCLIS NFRAP. Archived SEMS sites with a status of No Further Remedial Action Planned (NFRAP), denoting sites where, following an initial investigation, either no contamination was found, contamination was removed quickly without need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. The NFRAP status does not necessarily indicate that no environmental concerns are present.	½ mile
RCRA COR	Hazardous waste handlers with Resource Conservation and Recovery Act (RCRA) corrective action activity.	1 mile
RCRA TSD	RCRA non-CORRACTS hazardous waste Treatment, Storage, and Disposal (TSD) Facilities.	½ mile
RCRA SQG/LQG	RCRA sites that are hazardous waste small or large quantity generators.	Site and adjoining properties
IC/EC	Institutional Controls or Engineering Controls maintained for the purpose of tracking sites that may contain residual contamination and activity and use limitations.	Site
ERNS	Emergency Response Notification System. Information on releases of oil and hazardous substances.	Site

STATE & TRIBAL DATABASES SEARCHED		
Database	Description	ASTM Search Distance
SHWS	State Hazardous Waste Sites, which is the state equivalent to CERCLIS.	½ mile
SWF/LF	Solid Waste Acceptance Facilities/Landfills, which may include active or inactive facilities, landfills, or open dumps.	½ mile

STATE & TRIBAL DATABASES SEARCHED		
Database	Description	ASTM Search Distance
UST	Registered underground storage tank sites.	Site and adjoining properties
LUST	Leaking underground storage tank (LUST) sites.	½ mile
Brownfield	Brownfields or voluntary cleanup program sites	½ mile
IC/EC	State equivalent to Federal IC/EC Registries.	Site

The regulatory database report identified the following listing that appears to correspond to the Site.

RESULTS SUMMARY – SITE		
Site Description	Database	Details
Frederick Brick Works 184 East South Street	UST	One 550-gallon gasoline UST and one 1,000-gallon gasoline UST, permanently out of use.
	LUST	Case No. 99-2763FR, closed. Release and cleanup reported.

As discussed in Section 6.3, 550- and 1,000-gallon USTs were removed from the northwestern portion of the Site in 1999 and petroleum impacts were identified at the time of the removal. The MDE OCP has since closed Case No. 99-2763FR. A MDE facility summary does not identify additional USTs registered at the Site.

The regulatory database report identified the following regulatory sites located adjacent to the Site.

RESULTS SUMMARY – ADJACENT SITES			
Site Description	Database	Details	Approximate Distance/Direction from Site
Frederick Terminal, Griffith Energy Services 200 East South Street	UST	Two 1,000-gallon gasoline UST, one 1,000-gallon diesel UST, one 1,000-gallon heating oil UST, and one 1,000-gallon used oil UST, each permanently out of use.	Adjacent north
	LUST	OCP Case No. 92-0679FR, closed. Well-groundwater contamination, motor-lube oil. Release but no cleanup reported. OCP Case No. 96-1193FR, closed. Well-groundwater contamination, motor-lube oil. Release and cleanup reported. OCP Case No. 10-0026FR, closed. Tank closure, motor-lube oil. Release and cleanup reported.	
	IC/EC	Engineering controls, double walled containment.	

RESULTS SUMMARY – ADJACENT SITES			
Site Description	Database	Details	Approximate Distance/Direction from Site
Verizon Environmental, C&P Telephone, Verizon Communications 450 East South Street	UST	One 1,000-gallon used oil UST currently in use. One 10,000-gallons gasoline and one 1,000-gallon used oil UST permanently out of use.	Adjacent north
	LUST	OCP Case No. 93-1627, closed. closed. No release or cleanup reported.	
	RCRA-SQG	No violations reported.	
Southern States Coop. East South Street	UST	One 1,000-gallon and one 550-gallon gasoline UST permanently out of use.	Adjacent north
Carrol Creek Refinishing 522 East South Street	RCRA-SQG	No violations reported.	Adjacent north
Daniel G. Schuster, Inc. 530 East South Street	IC/EC	Engineering controls, double walled containment.	Adjacent north

The MDE OCP facility summaries for the above referenced sites were reviewed, and with the exception of a 1,000-gallon used oil UST registered at 450 East South Street, no additional USTs are registered at the above referenced sites. The above IC/EC designations appear to be associated with double walled containment facilities for petroleum storage in ASTs at 200 and 530 East South Street. The 200 East South Street facility was also identified in EDR’s non-ASTM historical automotive facility database, which indicated that this Based on their proximity to the Site, one or more of the above referenced sites may have contributed to the environmental impacts previously identified on the Site.

Numerous additional regulatory sites were identified in the surrounding region, greater than 500 feet from the Site. Based on the distances from the remaining regulatory sites to the Site, the assumed direction of groundwater flow, and/or their regulatory statuses, it is unlikely that the identified regulatory sites have adversely impacted the Site.

7.2 Supplemental Databases Reviewed

In addition to submitting a written inquiry to MDE, GTA reviewed the MDE Land Restoration Program (LRP) online map on March 7, 2022. This map identifies sites that have had MDE LRP regulatory involvement. The map did not identify the Site as a site of MDE LRP regulatory involvement. The map identified five nearby sites as sites of MDE LRP regulatory involvement. Frederick County Public School’s Central Office, Frederick Parcel G, and Frederick Revitalization I, Frederick Corner I (Bluegrass), and Fredrick Corner II and III were identified as sites of MDE LRP regulatory involvement. Of these sites, additional information was only available for the Frederick Revitalization I site. This site was issued a No Further Requirements Determination (NFRD) after the MDE reviewed site characterization data. The Frederick Corner sites have been withdrawn from the Voluntary Cleanup Program (VCP).

7.3 Local Regulatory Agency Review

GTA submitted written inquiries to regulatory agencies concerning potential environmental issues associated with the Site as summarized in the table below. Copies of GTA’s written inquiries and agency responses are included in Appendix C.

Agency	Request	Agency Response	Summary
MDE	Email submitted 3/7/22	Pending	If such information is received at a later date and materially alters the findings of this assessment, GTA will submit an addendum to the Client.
Frederick County Health Department	Email submitted 3/7/22	Pending	If such information is received at a later date and materially alters the findings of this assessment, GTA will submit an addendum to the Client.

8.0 GEOTECHNICAL EVALUATION

GTA concurrently performed a geotechnical investigation which included 22 Standard Penetration Test (SPT) borings. The borings were drilled to depths ranging from 6.5 to 25 feet bgs, and auger refusal was encountered prior to reaching the planned termination depths in several borings. Topsoil or asphalt was encountered at the surface of the borings. In 13 of the borings, existing fills were encountered on the central, northern, and southwestern portions of the Site. These existing fills were generally characterized as silt sand, sandy clay, and silts mixed with limestone fragments. Plastic and brick debris was identified in two borings, and apparent ash was observed in one other. Beneath the fills the borings encountered native silty sands, silt, and clay. Refusal on weathered rock was encountered at several locations. Groundwater was encountered 13½ to 23½ feet below existing grades in three borings. Stained soils or unusual odors were not encountered in the borings. Additional discussion concerning the subsurface exploration, including logs and geotechnical recommendations, is presented under separate cover.

9.0 PHASE II ESA

9.1 Sampling Rationale

As part of the brick manufacturing process, clay and other raw materials were mined from portions of the Site. Information provided in the referenced reports indicated that some of these former borrow areas were utilized by the City of Frederick as a municipal dump from the 1890s through 1947. These municipal dump areas were identified on and adjacently south of a Verizon facility located north of the north-central portion of the Site. Additional fill materials were reportedly placed on the central and southern portions of the Site during the 1960s and 1990s. The most recent fill activities were reportedly conducted by the Richard F. Kline Company.

Based on the above information, GTA proposed a methane gas evaluation of the Site that included the installation and monitoring of 22 gas monitoring probes (methane probes). GTA’s assessment with respect to the presence and level of methane hazard, and recommended mitigating measures, if

needed, are presented herein. These recommendations are based on analysis of the available field data, observed subsurface conditions, and review of the available plans and published regulatory/engineering guidance.

9.2 Methane Occurrence

Generation and accumulation of methane gas from buried organic matter occurs due to anaerobic biodegradation of the organic matter that produces biogases. The biogas is typically about 60% methane and 40% carbon dioxide (CO₂). The methane component of the biogas will not burn or explode in the subsurface soils, but can create hazards if the gas production volumes are large enough and the gas flow and accumulates into enclosed or poorly ventilated spaces.

It is important to note that gases generated in the subsurface may travel a considerable distance from source materials, and the routes followed by such gases are difficult to predict and may change depending upon weather conditions, ground cover, and other factors. The biogas will tend to follow a path of least resistance. The rate and distance of gas migration are also influenced by the barometric pressure and moisture conditions of the near-surface soils. In addition, alterations in the site vicinity, such as grading (i.e. cuts and fills) and site developments (i.e. utilities, paving, and construction of buildings), may alter or provide new migration pathways.

Gases in subsurface tend to move from areas of high gas concentration to areas with lower concentration (diffusion). The gases also move from high pressure areas to low pressure areas (convection). The higher gas concentration and pressure in the subsurface result in diffusion and convection flow of the gases to the atmosphere and surrounding soils.

The presence and accumulation of methane gas within site improvements (including buildings, basements, footing excavations, utility trenches, etc.) can represent an explosion hazard. Methane is non-toxic; however, it is classified as an asphyxiant because it can displace air and create an oxygen deficient environment. Methane is flammable and may be explosive when it is present in the atmosphere or indoor air between 5% (Lower Explosive Limit, LEL) and 15% (Upper Explosive Limit, UEL) by volume. United States Environmental Protection Agency (USEPA) criteria and Maryland State regulations for Municipal Solid Waste Landfills require that the concentration of methane gas should not exceed the LEL at the facility boundary or 25% of the LEL (1.25% by volume) in facility structures. If the methane gas levels exceed the specified limits, implementation of a gas control/remediation plan is required. The methane concentration range of interest runs from the background level of 2 ppmv (parts per million by volume) to 1.25% by volume (12,500 ppmv or 25% of the LEL). Immediate evacuation of the building is generally required for readings of 1.25% by volume (25% of LEL) or higher based on the National Fire Code.

9.3 Gas Monitoring Probe Installation

Between May 9 and 17, 2022, GTA personnel performed 22 SPT borings on the Site in conjunction with a concurrent geotechnical evaluation using GTA's ATV-mounted Diedrich D-50 drill rig. These borings, which were identified as GTA-1 through GTA-22, were advanced to depths up to approximately 25 feet

below bgs. The exploration locations were selected by GTA, to bracket varying site conditions. Explorations were performed, generally in areas where existing fills were anticipated, based on nearby previous explorations or existing site conditions and topography, in locations just outside of known fill areas, and in areas of expected native soil. The exploration locations were selected by GTA and field located utilizing a hand-held global positioning system (GPS) unit. The boring and subsequent methane monitoring probe locations are depicted on the *Exploration Location Plan* included in *Appendix A*. Prior to the drilling activities, GTA contacted Miss Utility and contracted a private utility locating service in an attempt to avoid buried utilities.

The observed surface composition at the boring locations is described in Section 8. Boring Logs are included as Appendix E.

The soil borings were subsequently converted to methane probes. The methane probes were installed to depths ranging from 6.5 to 25 feet below existing grades using one-inch diameter PVC casing with a bottom cap. The bottom portion of each probe was constructed using slotted PVC screen to allow for the intrusion of subsurface gases into the probe. The PVC screen was extended from the bottom of the borehole to approximately 2 feet below existing grades. A solid PVC casing was used for the upper 2 feet and the probe stick-up. The annular space around the casing was filled with pea gravel to approximately 1-foot below the existing ground surface, and bentonite was used from the top of the gravel pack to the ground surface to provide a surface seal. Soil was mounded around the probe to promote water drainage away from the probe. The monitoring probes were finished with a slip-on cap fitted with a valve sampling port. Additionally, a stick-up surface protective cover was installed at each probe. A Methane Probe Typical Detail, which depicts the typical methane monitoring probe construction, is included in Appendix A.

9.4 Methane Screening

On May 24, 2022; June 17, 2022; and July 7, 2022, GTA personnel performed field screening of the methane probes using a Landtec GEM 5000 landfill gas analyzer. The first field screening event was conducted approximately a week after the installation of the methane monitoring probes. Subsequent screenings were conducted at approximate three-week intervals thereafter. The gas analyzer is equipped with electrochemical and dual wavelength infrared sensors to record the presence and concentrations of methane and other gases, pressure transducers to measure barometric and relative pressures, and a pump to facilitate the extraction of gases from the probe. Prior to the field monitoring events, the gas analyzer was field calibrated in accordance with the manufacturer's guidelines using a calibration gas of a known composition.

Prior to the screening of each methane probe, the landfill gas analyzer was purged to ensure that any residual gases were evacuated from the gas analyzer and attached hose assembly. The relative pressure transducer was allowed to stabilize and zeroed, if necessary. The hose assembly attached to the landfill gas analyzer was then connected to the sampling port on the methane probe with a sealed, quick-connect fitting. Once connected, the relative pressure reading was allowed to stabilize, and the relative and barometric pressures were recorded. The pump was then activated and run continuously for a

period of five minutes to extract the gases from the probe. During this period, the detected gas concentrations were monitored and recorded. The maximum observed concentrations of methane and carbon-dioxide, and minimum observed oxygen concentrations, is presented in the Methane Monitoring Field Collection Data Sheet, included as Appendix F.

Methane was detected in two methane probes during the first sampling event. These concentrations ranged from approximately 2 to 4% LEL which is equal to approximately 0.1 to 0.2 % by volume in methane probes GTA-7 and GTA-11. It should be noted that these two probes encountered existing fills and were located within or adjacent to areas where historical municipal dumping had occurred. No methane was detected in the remaining probe locations or during subsequent screening events. Little to no pressure was observed at the methane probes. The relative pressure can be impacted by environmental factors including the barometric pressure, groundwater levels, precipitation, and other factors.

10.0 CONCLUSIONS

The Site consists of approximately 64.6 acres located south of East South Street in the Frederick area of Frederick County, Maryland. The westernmost portion of the Site is separated from the remainder of the property by East Street. The Site contains asphalt and concrete covered areas, a construction storage area, disturbed land, open fields, and undeveloped woods. A former railroad easement crosses the northeastern portion of the Site. One portable 100-gallon AST was observed on the northwestern portion of the Site. In addition, one apparent remnant groundwater monitoring well was identified on the north-central portion of the Site. No other ASTs, USTs, or groundwater monitoring wells were identified in association with the Site.

The northwestern portion of the Site historically contained the Frederick Brick Works facility, including several buildings and kilns, since at least 1873. This facility produced bricks and sold coal from the late 1800s until the 1940s. From the late 1940s until the early 2000s, the facility sold brick manufactured by others and coal. The former buildings were demolished in approximately 2019.

Clay for the brick manufacturing process was mined from the north-central, central, and southern portions of the Site. Some of these former borrow areas were utilized by the City of Frederick as a municipal dump from the 1890s through 1947. The municipal dump areas were located on and adjacent to the central portion of the Site. Additional fill materials were reportedly placed on the central and southern portions of the Site during the 1960s and 1990s.

Between 1998 and 2019, several prior environmental evaluations were performed on the Site. The majority of these evaluations concentrated on the northwestern portion of the site where the brick manufacturing facility had been located, and within the areas of reported fills.

In 1999 one 550-gallon gasoline UST and one 1,000-gallon gasoline UST and they were removed from the former brick manufacturing facility Site under MDE OCP supervision. Petroleum-impacted soil was identified in association with the 1,000-gallon UST, and this soil was excavated and bioremediated on-site. The MDE OCP has since closed the case (OCP Case No. 99-2763FR) associated with these UST

removals. These USTs and associated OCP UST removal case were identified in a regulatory data base report in association with the Site.

Three groundwater monitoring wells were installed on the north-central and northeastern portions of the Site. The groundwater monitoring well observed during this evaluation appears to correspond to one of these wells. One of the wells did not yield water, but the other two wells were sampled and the VOCs methylene chloride and MTBE was identified in one well at concentrations above the current MDE GCS.

Test pits and soil borings identified fill throughout the Site. Little to no fill was identified on the northern, eastern (open fields) and northwestern (former Frederick Brick Works facility) portions of the Site. Fill materials mixed with construction debris was identified on the northwestern, north-central, and southern portions of the Site. Fill depths on the northwestern and north-central portions of the Site extended up to 9 to 10 feet bgs, while fills on the southern portion of the Site extended up to 34 feet bgs. Fill materials on the central portion of the Site consisted of soil mixed with municipal waste, ash, and brick; and was identified up to 16 feet bgs. Fill materials on the north-central portion of the site were identified as soil mixed with construction debris, municipal waste, ash, and brick; and was identified up to 15 feet bgs. Fill materials identified at the Site represent an environmental concern to the Site due to the potential methane generated by the breakdown of buried debris.

Sampling of the fill material has identified TPH DRO, several metals (primarily arsenic, lead, and mercury), and PAHs (most notably benzo-a-pyrene) above the residential RCV for arsenic, the RCS, or the ATC for soil in western Maryland.

In conjunction with a concurrent geotechnical evaluation, GTA converted 22 geotechnical borings into to gas monitoring probes (methane probes). During May, June, and July 2022; GTA performed three rounds of methane screening at the Site. Little to no methane was detected during these screening events. Methane was only detected during the first screening event in two methane probes on the central portion of the Site. These methane concentrations ranged from 2% and 4% of the LEL. Based on the field screening results, it does not appear that methane represents and environmental concern to the Site.

The surrounding vicinity currently and has historically contained residential and commercial developments. A federal and state environmental regulatory database report identified several sites of environmental concern in the surrounding vicinity. Based on their locations relative to the Site, several of the nearby regulatory sites may have contributed to the impacts previously identified on the Site.

GTA has performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E1527-13 of the Site, as described herein. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of RECs in connection with the Site, except for the following:

- Soil and groundwater impacts have been identified in association with the Site.

GTA recommends that these findings be reviewed with the Client's development team to evaluate potential ramifications to the future ownership, use, and redevelopment of the Site. This review should also address environmental conditions relative to regulatory involvement. Specifically, GTA recommends that the information provided herein be submitted to the MDE Land Restoration Program for their review and development of a remedial plan between the ownership and development team, GTA, and the MDE.

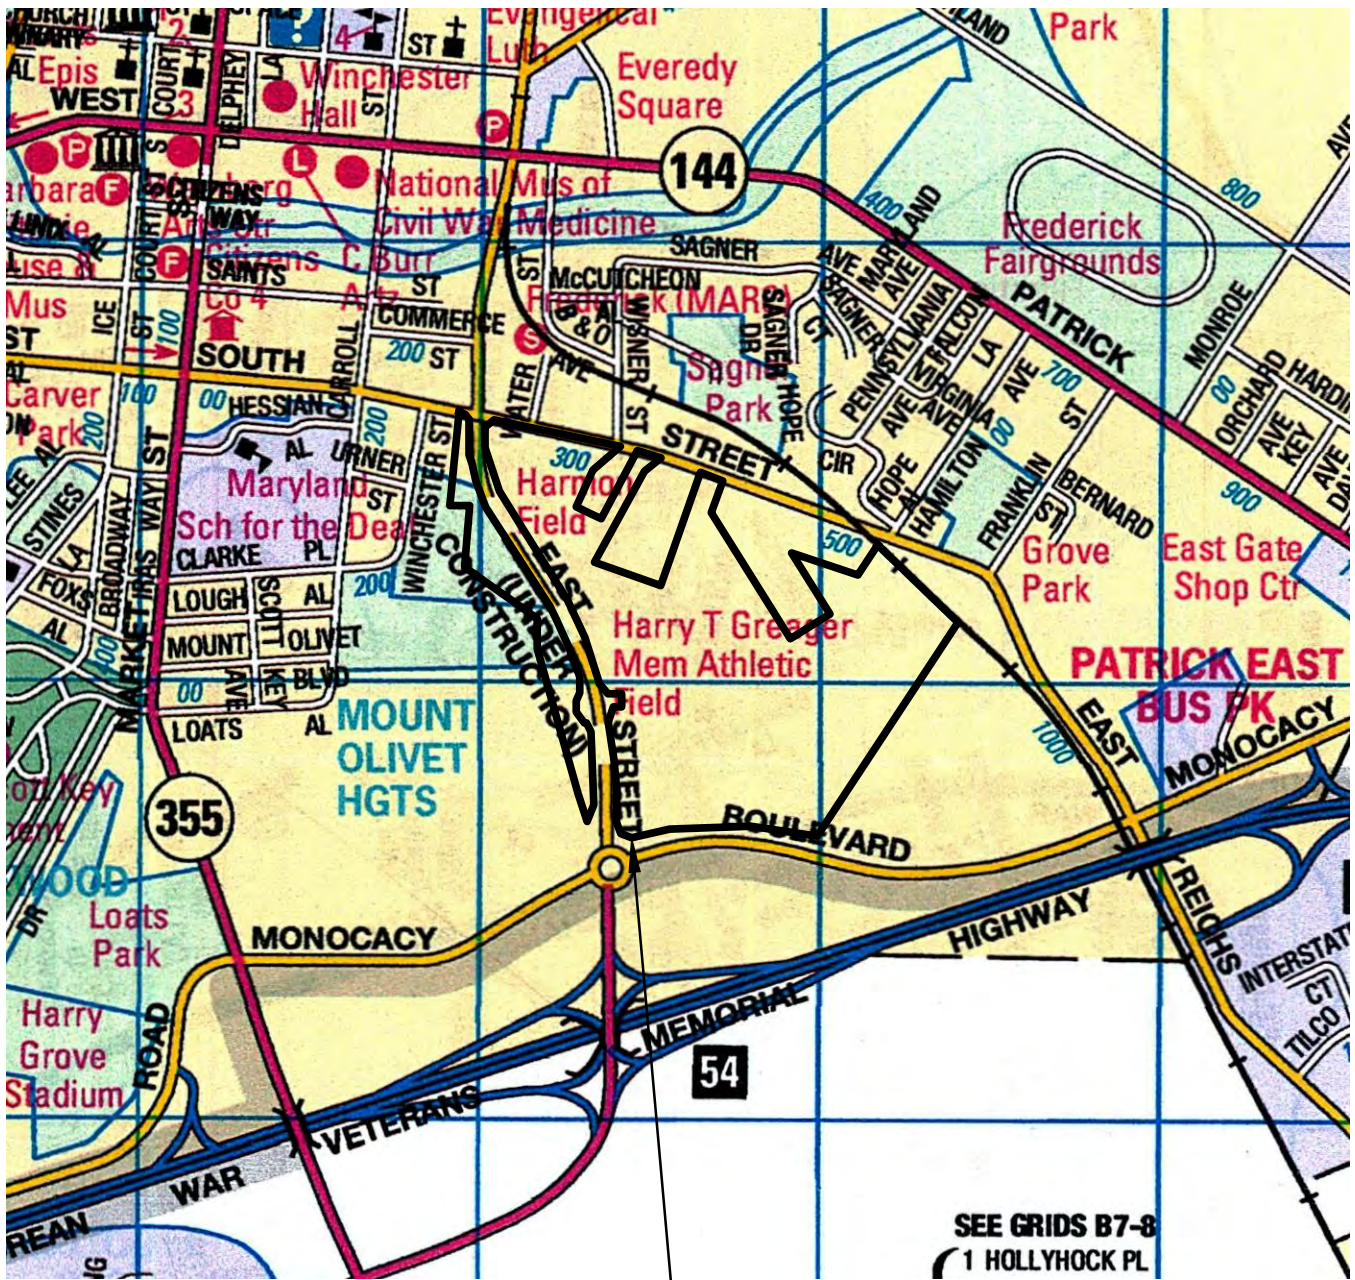

Although not considered a REC, the Site contains a remnant groundwater monitoring well. GTA recommends that if the well is no longer needed, it should be properly abandoned in accordance with applicable state and local regulations.

Although not considered a REC at this time, several buildings were previously located on the Site property and are no longer present. Such former structures may have utilized USTs for the storage of heating oil or other products. GTA recommends that if buried wastes, USTs, or contaminated media are encountered during future site activities, such materials should be removed and an environmental evaluation of the area performed.

Legend

GTA-1 Identification and approximate location of SPT borings performed by Geo-Technology Associates, Inc. (GTA) and converted to methane monitoring points in May of 2022.

Existing fill areas, as defined by Hydro Terra Group in the *Drawing Notes*, dated January 25, 2002.

- Areas A-1 through A-4:** These areas reportedly consist predominantly of native soils and have minimal to no existing fill, except along the railroad line to the northeast. Area A-3 contains up to about 10 feet of existing fill.
- Areas B-1 through B-3:** These areas reportedly consist of fill depths up to 9 to 34 feet. Generally deeper fill depths (greater than 10 feet) are estimated in the southern portions of the site. These soils consist predominantly of construction, demolition and land clearing debris-laden fill.
- Area C:** This area has estimated fills of up to 17 feet. The fill in this area reportedly contains the oldest burial waste on the property, and includes a combination of soil, coal ash, and solid waste (glass and rejected brick).
- Area D:** This area has estimated fills of up to 15 feet or more. The fill in this area reportedly contains a combination of municipal solid waste, construction and demolition debris, wood, and organic material.

Notes

1. Base image was adapted from the *Scheme A* layout included in the *Conceptual Master Plans* set, dated March 4, 2020, prepared by BCT Architects.
2. Exploration locations were selected and approximately field-located by GTA using a hand-held GPS unit. Exploration locations should be considered accurate only to the degree implied by the method used.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

USER QUESTIONNAIRE

To: Ms. Kimberly Potember/Greenberg Gibbons
From: Craig Brune
Date: March 7, 2022

At your request, Geo-Technology Associates, Inc. (GTA) is performing a Phase I Environmental Site Assessment (ESA) of **Frederick Brick Works** in Frederick, Maryland. As you probably know, we use the Phase I ESA to evaluate the likelihood that the site may have been impacted with petroleum or hazardous substances (i.e., we identify Recognized Environmental Conditions [RECs]).

Based on the current ASTM Standard (E1527-13), we need to ask you (as our client and the “User” of the report) several questions about the property. Although we are developing our own professional opinion about the site’s environmental condition, ASTM requires that we ask you, as the User of the report, the following questions to obtain any relevant knowledge that you may have.

Please review the questions below and provide your responses (to the best of your knowledge), explaining any “yes” answers at the bottom of the page. Please either return the completed form, or call me to discuss with verbal responses.

1.	Environmental liens that are filed or recorded against the Site. <i>Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the Site under federal, tribal, state, or local law?</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
2.	Activity and use limitations (AULs) that are in place on the Site or that have been filed or recorded against the Site. <i>Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions, or institutional controls that are in place at the Site and/or have been filed or recorded against the Site under federal, tribal, state or local law?</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
3.	Specialized knowledge or experience of the person seeking to qualify for Landowner Liability Protection. <i>Do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
4.	Relationship of the purchase price to the fair market value of the Site if it were not contaminated. <i>Do you have reason to believe that the purchase price of the Site is lower than the fair market value due to the known or suspected presence of contamination?</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
5.	Commonly known or reasonably ascertainable information about the Site (40 CFR 312.30). <i>Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
	<i>a) Do you know the past uses of the property?</i> <i>b) Do you know of specific chemicals that are present or once were present at the property?</i> <i>c) Do you know of spills or other chemical releases that have taken place at the property?</i> <i>d) Do you know of any environmental cleanups that have taken place at the property?</i>	

6. The degree of obviousness of the presence or likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation.

Yes
 No

Based on your knowledge and experience related to the Site, are there any obvious indicators that point to the presence or likely presence of releases at the Site?

Please explain any "yes" answers: My knowledge of the site is limited to review of previous environmental site assessments.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQQ: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQQ list, as provided by EDR, and dated 09/13/2021 has revealed that there are 6 RCRA-VSQQ sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

MD SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of the Environment's Notice of Potential Hazardous Waste Sites list.

A review of the MD SHWS list, as provided by EDR, and dated 10/01/2009 has revealed that there are 2 MD SHWS sites within approximately 1 mile of the target property.

MD HIST LUST: In 1999, the Department of the Environment stopped adding new sites to its Recovery Sites Database. Current leaking underground storage tank information maybe found in underground storage tank information maybe found in the OCPCASES database.

A review of the MD HIST LUST list, as provided by EDR, and dated 03/01/1999 has revealed that there are 2 MD HIST LUST sites within approximately 0.5 miles of the target property.

Lists of state and tribal voluntary cleanup sites

MD VCP: The Voluntary Cleanup Program, administrated by the Dept. of the Environment, streamlines the environmental cleanup process for sites, usually industrial or commercial properties that are contaminated, or perceived to be contaminated, by hazardous substances. Developers and lenders are provided with certain limitations on liability and participants in the program are provided certainty in the process by knowing exactly what will be required.

A review of the MD VCP list, as provided by EDR, and dated 09/02/2021 has revealed that there are 6 MD VCP sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

US MINES: Mines Master Index File. The source of this database is the Dept. of Labor, Mine Safety and Health Administration.

A review of the US MINES list, as provided by EDR, has revealed that there is 1 US MINES site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
BLUEGRASS MATERIALS Database: US MINES, Date of Government Version: 11/02/2021 Mine ID:: 1800013		ESE 1/8 - 1/4 (0.216 mi.)	T111	208

MD LRP: A listing of Land Restoration Program sites. Site types included in the database are: Voluntary Cleanup Program, National Priority List, Brownfields, Site Assessment, Formerly Used Defense Site, State Master List, Non Master List, Groundwater Investigation and Federal Facility.

A review of the MD LRP list, as provided by EDR, and dated 08/16/2021 has revealed that there are 16 MD LRP sites within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 6 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
THE AMERICAN LIGHT A	E PATRICK STREET	NNW 1/8 - 1/4 (0.239 mi.)	U114	209
FREDERICK TOWN GAS	350 CHURCH STREET	N 1/4 - 1/2 (0.417 mi.)	AC161	267

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
MD-PEMIS (Maryland - Permanent (Air) Emission) database houses data related to Air Emissions. Also known to the EPA as National Emissions Inventory (NEI).

Environmental Interest/Information System:

MD-EPSC (Maryland - Environmental Permit Service Center) promotes multi-media pollution prevention and provides permit assistance to business and industries. An online permit guide is available and lists all permits, licenses and approvals that are issued by MDE. US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System:

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA).

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V

of the Clean Air Act.
MD-PEMIS (Maryland - Permanent (Air) Emission) database houses data related to Air Emissions. Also known to the EPA as National Emissions Inventory (NEI).
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA).

**COMMUNITY WATER SYSTEM
WATER TREATMENT PLANT**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA).
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

MD-EPSC (Maryland - Environmental Permit Service Center) promotes multi-media pollution prevention and provides permit assistance to business and industries. An online permit guide is available and lists all permits, licenses and approvals that are issued by MDE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

MD-PEMIS (Maryland - Permanent (Air) Emission) database houses data related to Air Emissions. Also known to the EPA as National Emissions Inventory (NEI).

STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER
AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

Environmental Interest/Information System:

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA). RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Registered Storage Tanks

Historical UST: Historical UST Registered Database

In 1997 the Department of the Environment sent out registration forms to all the owner's listed in the UST database. Once they got the registration forms back they entered the information into a new UST database. we call this database UST. Because not all owners returned their forms, we kept the old UST database and labeled it HIST UST so that we would not be missing any past UST records. This listing is no longer updated or maintained by the agency. It is current through November 1996.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PCS: Permit Compliance System

PCS is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

FREDERICK BRICK WORKS
184 EAST SOUTH STREET
FREDERICK, MD 21701

TARGET PROPERTY COORDINATES

Latitude (North):	39.406374 - 39° 24' 22.95"
Longitude (West):	77.401774 - 77° 24' 6.39"
Universal Transverse Mercator:	Zone 18
UTM X (Meters):	293203.8
UTM Y (Meters):	4364417.5
Elevation:	299 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14434514 FREDERICK, MD
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
24021C0292D	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
24021C0291D	FEMA FIRM Flood data

24021C0294D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
FREDERICK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Buckeystown

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	loam	Not reported	Not reported	Max: 14.12 Min: 4.23	Max: 6 Min: 5
2	9 inches	59 inches		Not reported	Not reported	Max: 14.12 Min: 4.23	Max: 6 Min: 5
3	59 inches	83 inches		Not reported	Not reported	Max: 14.12 Min: 4.23	Max: 6 Min: 5

Soil Map ID: 2

Soil Component Name: Buckeystown

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS RADON

AREA RADON INFORMATION

EPA Region 3 Statistical Summary Readings for Zip Code: 21701

Number of sites tested: 1446.

Maximum Radon Level: 279.2 pCi/L.

Minimum Radon Level: -0.3 pCi/L.

pCi/L <4	pCi/L 4-10	pCi/L 10-20	pCi/L 20-50	pCi/L 50-100	pCi/L >100
627 (43.36%)	457 (31.60%)	216 (14.94%)	111 (7.68%)	23 (1.59%)	12 (0.83%)

Federal EPA Radon Zone for FREDERICK County: 1

- Note: Zone 1 indoor average level > 4 pCi/L.
 : Zone 2 indoor average level >= 2 pCi/L and <= 4 pCi/L.
 : Zone 3 indoor average level < 2 pCi/L.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Maryland Public Supply Wells

Source: Department of the Environment

Telephone: 410-537-3702

Water use types included are farm (livestock watering and agricultural irrigation), geo-thermal, industrial-commercial-state and federal government, municipal, test-observation-monitoring.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Location Information

Source: Department of the Environment.

Telephone: 410-537-3557

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EPA Region 3 Statistical Summary Readings

Source: Region 3 EPA

Telephone: 215-814-2082

Radon readings for Delaware, D.C., Maryland, Pennsylvania, Virginia and West Virginia.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey
