Subject: Potable Drinking Water Supply Well Sampling Results
9 Meadow Spring Drive
Bel Air, Maryland 21015

Dear Mr. Venturella:

Brown and Caldwell, on behalf of Drake Petroleum Company Inc. (Drake) would like to thank you for allowing us to conduct sampling of your potable drinking water supply well on September 12, 2013.

The potable drinking water supply well sample collected from your residence was analyzed for volatile organic compounds (VOCs) including petroleum constituents, using the United States U.S. Environmental Protection Agency (USEPA) approved method for drinking water samples (US EPA Method 524.2). The following constituents were detected in your potable drinking water supply well: Chloroform (estimated value of .076 micrograms per liter (µg/L)), Methyl Tertiary Butyl Ether (estimated value of 0.27 µg/L), and Tetrachloroethylene (estimated value of 0.064 µg/L). All detected constituents were below Maryland Department of the Environment (MDE) drinking water standards. The MDE drinking water standard for Chloroform is 80 µg/L , Methyl Tertiary Butyl Ether is 20 µg/L, and Tetrachloroethylene is 6.9 µg/L, which can be found in the Code of Maryland (COMAR) 26.08.02.03-2. Your analytical results are attached.

As you know, sampling of your potable drinking water supply well was conducted by Drake as part of a groundwater investigation being conducted in cooperation with the MDE and the Harford County Health Department. Drake would like to sample your potable drinking water supply well again in the month of March 2014 as directed by the MDE. BC will contact you regarding the next round of sampling.

Again, thank you for your patience and cooperation. If you have any questions regarding the enclosed test results feel free to call Brown and Caldwell at (856) 330-9406.

Very truly yours,
Brown and Caldwell

Carolyn Roth
Project Manager
